

THE MEDICAL HOME:

Every child deserves a medical home, where care is accessible, continuous, comprehensive, patient- and family-centered, coordinated, compassionate, and culturally effective. As your child's childcare provider we play a part in a larger system lead by your family and your child's primary healthcare physician. This enables the health and well being of your child to be monitored both at home and at TPA.

Having a medical home is important because the primary care provider can get to know your child and family, they can offer support for all stages of your child's development and they are able to track long term trends of growth and development.

Who is involved in a Medical Home?

- Child care providers
- Dentists
- Financial assistance
- Health care specialists, such as speech, physical, and occupational therapists
- Mental health services
- Parent support
- Parents or guardians
- Pediatricians
- Religious/spiritual support
